

Description

Introducing the DSG-K10 Sampler, a compact and easy-to-use sample/playback unit housed in a tough stainless steel chassis. The DSG-K10 is compatible with all audio systems (external PSU required, sold separately) and will simply connect between your existing music source and mixer/amplifier automatically muting the music source when a sample plays.

Features

- Uses uncompressed WAV file format giving high-quality sound (CD-quality: 44kHz, 16-bit, stereo)
- 10 samples, unlimited in length
- 10 banks with different samples
- The volume can be adjusted for each sample separately if samples are too loud or quiet
- A timer can be used to play samples automatically
- 1 sample can be started by an external switch, relay contact...
- The samples are stored on an SD memory card which is accessible on the back of the
